

IG Manufacturer Toll-Free Numbers

PPTA member companies manufacture lifesaving therapies that improve and save the lives of patients with rare, chronic, and often genetic diseases. Given recent reports regarding the availability of various immunoglobulin (IG) products that are administered intravenously (IVIG) or subcutaneously (SCIG), PPTA is sharing Manufacturer Toll-Free Numbers (MTFNs) currently in place. We will update this list as necessary.

The available MTFNs are intended to enable health care professionals to inquire about specific brands of IG therapy for their patients. The MTFNs are for health care professionals because when an incoming call is received, the company representative may require specific clinical information that only the treating physician or health care provider can furnish. If the manufacturer and health care professional are able to meet the patient's clinical need, the caller may be required to provide their DEA Registration Number and specific billing and shipping information.

PPTA understands that patients want information about their therapies. If you are a patient experiencing IG access challenges, please contact your health care professional. We encourage patients to work with their health care provider to obtain information.

PPTA member companies provided and solely operate the toll-free numbers in compliance with their individual corporate policies.
